

Dear Mr. Sage,

I just finished reading the report on WOW. I am fully in support of Wind on the Water project. I have a suggestion about what is listed as a potential problem. The use of fiberglass blades once they are decommissioned is a concern. I see them as a great fencing for State Park's trails. It would be a badge of honor to have them on their side on the walking and biking trails. they could surround any park areas where fencing is needed.

Please continue your efforts to make sure we as Wisconsin Energy users go forward with WOW. Did you know that WOW upside-down is MOM? Well mother earth is calling on us to make this environmentally progressive move!

Sincerely,
Maggie Koller
